Review by Kasey Not sure if the game is about what you say or are really creating. This is a beautiful game but when I play it I feel like the whole thing is a re-run of the original in some cases. I don't understand why the game would bother introducing new mechanics if they weren't going to add the pieces together to create a whole and unique experience. They re-used certain mechanics for no reason, while others made no sense at all and it made the whole game feel incomplete. The only true original parts of the game were the two bosses, the map system, and the 'time twist' mechanism. However all of that was well planned out and it worked well. I do give them credit for being able to bring out a bunch of mechanics that other games had tried to do before. That's a hard thing to do. Usually it leads to an unoriginal mess. To sum it up the game is awesome but I don't want to play it again. (I'm actually in the process of replaying the original version. I've replayed it twice now. I also played the PS1 version a while back and it has the same graphics and mechanics as the PC version. I'm sure the PS1 version isn't perfect. There are a few minor things that don't work the same as the PC version, but it's mainly the same game with different graphical presentation).

24X07: MurshidGjora Hi art lovers, Today's work will be online 24 hours :) The Shooting this latest work is just 3 hours on a Digital Epson 3880xi There is some corrections to do and some more work in the Image, the final image is around 2.5 Mbits in size. It is about 5x7 inches in size Thanks for reading my work :) Suresh Couple of things-- the focus could probably be a little better, people tend to focus on the wedding ring a bit too much-- i think i would crop it tighter, remove the far left and right edges, and add some black to the edge of the frame to achieve a more natural feeling. but maybe i am just overly focused on this one. it was cool!! Oh, before I forget, these are the EXIF information of that composition taken with a Canon 5d Mk II camera. I did some doctoring in Photoshop CS5 to compensate and adjust for aberrations, a little conversion to jpg, converting to sRGB, edited by value and contrast settings. They are IMG's exported at 8Mbit/s. Had to crop and crop again and again....**

Neurochemistry Imaging also referred to as neuroimaging and neuroimaging provides a detailed biomedical and pathological diagnosis of the nervous system. It is used to detect cognitive decline or imbalances, neurological diseases, and assist the diagnosis process of mental illness such as schizophrenia and other disorders. It enables one to understand the pathophysiology of diseases and disorders that affect the nervous system. It is a part of the neurotechnology that has been developing over the past few decades. Brain imaging has been a tool in neuroscience for neurology and psychiatry for many decades. When functional

studies were first used, EEGs and oximetric studies were the most common tools used for diagnosis and study. With the advent of Magnetic Resonance Imaging, PET scans, and other functional imaging methods, we now have more tools to identify and interpret information including the precise imaging of genes and proteins that can be associated with illnesses, as well as informing us of the characterization of brain circuitry and activity. Neuroimaging can be used to study brain function; it can provide objective information about the structure and functioning of the brain, and the capacity of cognitive, sensory, and motor processing
