We are hacker of facebook account/password and many other social media accounts. You can also download our online social media hacking tools.

5 Best Facebook Password Cracking Software Hacking Password .Q: Interpolate NaNs in Dask Dataframe I have a dataframe with multiple columns that I want to interpolate to fill in missing values. I've seen several ways that interpolate missing values in pandas, for example: `import pandas as pd df = pd.DataFrame(np.random.randn(10, 2), columns=['a', 'b']) df.a.isnull().interpolate().fillna(method='bfill', inplace=True)` Is there an equivalent dask DataFrame operation, or do I have to iterate over a chunk of my data first? I have also looked at Interpolate Missing Data In Dask Dataframe but no examples are in python. A: Dask Series have a `fillna` method that works like `pd.Series.interpolate`. `from dask import dataframe as dd s = dd.Series([1.0, 2.0, NaN, 3.0, 3.0, NaN]) s.fillna(method='bfill')` 1 2 3 0 1.0 1 1 1 2.0 2 3 2 NaN 3 3 3 3.0 3 3 4 3.0 3 3 As far as pandas is concerned, there's nothing wrong with this. This is basically what `pandas.DataFrame.interpolate` does (but without the `inplace` flag). There's not really a "special" dask DataFrame operation that would allow this, but pandas allows you to use existing pandas functionality. It's pretty rare that I ask for a pandas solution 6d1f23a050
